It describes the idea of bundling data and methods that work on that data within one unit.

```js
class Employee {
    setEmpDetails(name, id, phone) {
        this.name = name;
        this.id = id;
        this.phone = phone;
    }

    getEmpName() {
        console.log(this.name);
    }
    getEmpId() {
        console.log(this.id);
    }
    getEmpPhoneNo() {
        console.log(this.phone);
    }
}

let emp1 = new Employee()
emp1.setEmpDetails("John", 319, 9788786086)
emp1.getEmpName();

OUTPUT : John
```

Polymerphism

It is the ability to create a variable , a function or an object that has more than one form.

```js
class Animal{

    constructor(name){
        this.name = name;
    }

    eats(){
        console.log(this.name, "eat food")
    }
}

class Alligator extends Animal{

    eats(){
```
